

Dear Mx. Hiring Manager

Being a soon to be computer science graduate and aspiring web developer, I was excited when I saw your not opening for an entry-level frontend developer. Having recently finished my internship this summer, I was able to further reinforce my skills in HTML/CSS, and React as well as picked up new additional skills that I believe would be able to contribute to the success of Circle.

Over the summer, I was a Front-end Developer Intern at IBM where I worked in an agile environment with a team of 12 members to develop and maintain the GLUI-NG web application. Through my time at IBM I was able to not only hone my skills in frontend web development but also picked up skills relating to containerization, Spring Boot, SQL, and databases, amongst other skills.

Several of my achievements while working at IBM included:

- Developing the new landing page of the GLUI-NG application.
- Incorporated responsive web design into newly implemented features and components.
- Placed within the top 5 of the Be(e) Innovative Intern Challenge in designing the design and architecture of a digital solution for the Waste Reduction category.

Not only was I fond of the work I do as a frontend developer, I am also quite proud of it as well. I believe my present experience can lead to growth for both parties involved and. Given the opportunity, I would like to discuss your upcoming projects and plans and share with you how my achievements at IBM and personal experience can contribute to Circle.

Sincerely,  
Jason Guo
